1. Use data from the PE Data Chart and construct a line graph comparing mass in kg to energy in Joules.
2. Establish two data sets. One set for KE and a second set for PE.
3. For each data set, draw a point to point line and a best fit line
4. Do not start the line on zero.
5. Include a title and key for the graph and labels for each axis.
6. Use a different color for each line (4 different colors)
7. Always use a ruler.
